Manual Use

Chauvet authorizes its customers to download and print this manual for professional information purposes only. Chauvet expressly prohibits the usage, copy, storage, distribution, modification, or printing of this manual or its content for any other purpose without written consent from Chauvet.

Document Printing

For best results, print this document in color, on letter size paper (8.5 x 11 in), double-sided. If using A4 paper (210 x 297 mm), configure the printer to scale the content accordingly.

Intended Audience

Any person installing, operating, and/or maintaining this product should completely read through the guide that shipped with the product, as well as this manual, before installing, operating, or maintaining this product.

Disclaimer

Chauvet believes that the information contained in this manual is accurate in all respects. However, Chauvet assumes no responsibility and specifically disclaims any and all liability to any party for any loss, damage or disruption caused by any errors or omissions in this document, whether such errors or omissions result from negligence, accident or any other cause. Chauvet reserves the right to revise the content of this document without any obligation to notify any person or company of such revision, however, Chauvet has no obligation to make, and does not commit to make, any such revisions.

Before You Begin

1. Before You Begin

What Is Included

- IP Tester
- Seetronic powerKon IP65 power cord to Edison
- USB cable
- 2 condensation valve blanks
- Condensation valve remover tool
- M12 threaded brass nozzle with push-to-connector fitting
- Quick Reference Guide

Claims

Carefully unpack the product immediately and check the container to make sure all the parts are in the package and are in good condition.

If the box or the contents (the product and included accessories) appear damaged from shipping, or show signs of mishandling, notify the carrier immediately, not Chauvet. Failure to report damage to the carrier immediately may invalidate the claim. In addition, keep the box and contents for inspection.

For other issues, such as missing components or parts, damage not related to shipping, or concealed damage, file a claim with Chauvet within 7 days of delivery.

Text Conventions

Convention	Meaning
1–512	A range of values
50/60	A set of values of which only one can be chosen
Settings	A menu option not to be modified
<ENTER>	A key to be pressed on the product's control panel

Symbols

Symbol	Meaning
	Critical installation, configuration, or operation information. Not following these instructions may make the product not work, cause damage to the product, or cause harm to the operator.
	Important installation or configuration information. The product may not function correctly if this information is not used.
	Useful information.

The term “DMX” used throughout this manual refers to the USITT DMX512-A digital data transmission protocol.

Safety Notes

Read all the following safety notes before working with this product. These notes contain important information about the installation, usage, and maintenance of this product.

This product contains no user-serviceable parts. Any reference to servicing in this User Manual will only apply to properly trained, certified technicians. Do not open the housing or attempt any repairs.

All applicable local codes and regulations apply to proper installation of this product.

- **CAUTION:**

- This product's housing may be hot when operating. Mount this product in a location with adequate ventilation, at least 20 in (50 cm) from adjacent surfaces.
- When transferring the product from extreme temperature environments, (e.g., cold truck to warm humid ballroom) condensation may form on the internal electronics of the product. To avoid causing a failure, allow the product to fully acclimate to the surrounding environment before connecting it to power.

- **ALWAYS:**

- Disconnect from power before cleaning the product.
- Connect this product to a grounded and protected circuit.

- **DO NOT:**

- Leave any flammable material within 50 cm of this product while operating or connected to power.
- Connect this product to a dimmer or rheostat.
- Operate this product if the housing, lenses, or cables appear damaged.
- Operate this product outdoors or in any location where dust, excessive heat, water, or humidity may affect it. (IP20)
- The maximum ambient temperature is 113 °F (45 °C). Do not operate this product at higher temperatures.
- The minimum startup temperature is -4°F (-20°C). Do not start the product at lower temperatures.
- The minimum ambient temperature is -22°F (-30°C). Do not operate the product at lower temperatures.
- To eliminate unnecessary wear and improve its lifespan, during periods of non-use completely disconnect the product from power via breaker or by unplugging it.
- In the event of a serious operating problem, stop using immediately.

If this Chauvet product requires service, contact Chauvet Technical Support.

2. Introduction

Description

The IP Tester is a portable, compact device for testing the vacuum and pressure capacity of IP-rated products. Testing profiles for Chauvet Professional IP-rated products are pre-loaded, and it is easy to build custom testing profiles. Connect to a PC with the built-in webserver for convenient storage of test data as well as software upgrades.

Features

- Portable, compact IP testing device capable of both vacuum and pressure testing parameters.
- Pre-loaded testing personality files for Chauvet Professional IP-rated products
- Easy to build custom testing profiles
- Built in webserver to easily connect to personal computers for creating fixture profiles and storing information from tests
- USB-C input for easy software upgrades and for storing fixture test data
- USB-B port for easy connection to PC
- Compact and impact resistant ABS plastic case is designed to fit in tool and road cases with touring in mind

Product Overview

Product Dimensions

3. Setup

AC Power

The IP Tester has an auto-ranging power supply and it can work with an input voltage range of 100 to 240 VAC, 50/60 Hz.

To determine the product's power requirements (circuit breaker, power outlet, and wiring), use the current value listed on the label affixed to the product's back panel, or refer to the product's specifications chart. The listed current rating indicates the product's average current draw under normal conditions.

- **Always connect the product to a protected circuit (a circuit breaker or fuse). Ensure the product has an appropriate electrical ground to avoid the risk of electrocution or fire.**
- **To eliminate unnecessary wear and improve its lifespan, during periods of non-use completely disconnect the product from power via breaker or by unplugging it.**

Never connect the product to a rheostat (variable resistor) or dimmer circuit, even if the rheostat or dimmer channel serves only as a 0 to 100% switch.

AC Plug

The IP Tester comes with a power input cable terminated with a Seetronic Powerkon A connector on one end and an Edison plug on the other end (U.S. market). If the power cable which came with the product has no plug, or if it is necessary to change the plug, use the table below to wire a plug.

Connection	Wire (U.S.)	Wire (Europe)	Screw Color
AC Live	Black	Brown	Yellow or Brass
AC Neutral	White	Blue	Silver
AC Ground	Green/Yellow	Green/Yellow	Green

PC Linking

The IP Tester is capable of linking with a personal computer using a USB type B to USB type A connection. Easily store and view test data and create fixture profiles via the built-in computer interface software.

USB B Connection

It is possible to connect the IP Tester to a PC via USB B connection. For further instructions on how to connect the IP Tester to a PC, visit the [Operation](#) section of this manual.

USB C Storage and Updates

The IP Tester will work with a USB C drive to perform software updates and store product test data.

Mounting

The IP Tester has a compact and impact-resistant ABS plastic case with rubber feet for placing on a flat and stable surface during use.

Connecting to a Fixture

Follow the instructions below to prepare the IP Tester to perform valid pressure and vacuum tests on a product.

1. Remove all condensation valves on the product with the included condensation valve remover tool and replace all but one of them with the valve blanks. Ensure that all valve blanks are sealed tightly.
2. Attach the threaded end of the M12 threaded brass nozzle to the remaining open condensation valve on the product.
3. Plug the air hose into the airline attachment of the IP Tester.

Storing the Product

When finished testing, the air hose must be removed to allow the case to close correctly.

1. Push down on the outer cylinder of the airline attachment.
2. Pull the air hose out of the attachment.

4. Operation

Control Panel Description

Button	Name	Function
	<UP>	Navigates upwards through the menu list or increases the value when in a function
	<MENU>	Exits from the current menu or function
	<DOWN>	Navigates downwards through the menu list or decreases the value when in a function
	<LEFT>	Navigates leftwards through the menu list
	<ENTER>	Enables the currently displayed menu or sets the selected value into the function
	<RIGHT>	Navigates rightwards through the menu list

Menu Map

Refer to the IP Tester product page on www.chauvetprofessional.com for the latest menu map and software.

Main Level	Programming Levels				Description

	YES	Edit Name		Adds a fixture “ Example_ ” and prompts to edit		
		Edit Data				
Information	V_-----			Displays firmware version		

Testing Parameters

The IP Tester tests the connected product's IP rating integrity using the following parameters:

- **target value:** The IP Tester will create vacuum or pressure of this value before holding. This value is negative for vacuum and positive for pressure.
- **min value:** If the vacuum or pressure goes above (vacuum) or below (pressure) this value while holding, the test fails.
- **time hold:** The IP Tester will hold for this number of seconds after achieving the target value.

Configuration Set-up

This section includes instructions for selecting a fixture profile of testing parameters, setting the display unit, editing fixture profiles, using the USB type C port, and deleting or creating fixture profiles.

Fixture Selection

Selecting a fixture profile applies the selected testing parameters to the [Auto Test](#) function.

1. Go to the **Set-up** main level.
2. Select the **Fixture Select** option.
3. Select the desired profile from the list of options. The parameter values will show on the display.

Unit

To select the unit of pressure/vacuum the product will display:

1. Go to the **Set-up** main level.
2. Select the **Unit** option.
3. Set the desired unit from **psi** (pounds per square inch) or **kPa** (kilopascals).

Edit Fixture Name

To edit the name of a fixture profile:

1. Go to the **Set-up** main level.
2. Select the **Edit Fixture** option.
3. Select the **Edit Name** option.
4. Select which profile name to edit from the list of existing profiles.
5. Use **<UP>**, **<DOWN>**, **<LEFT>**, and **<RIGHT>** to set the desired name for the selected profile.

Edit Fixture Data

To set the parameter values of a fixture profile:

1. Go to the **Set-up** main level.
2. Select the **Edit Fixture** option.
3. Select the **Edit Data** option.
4. Select which fixture to edit from the list of existing profiles.
5. Select which parameter to edit, from:
 - **pressure target value:** (from **0.00–08.71psi** or **00.0–60.0kPa**)
 - **time hold:** (for pressure test) (from **000–180s** [seconds])
 - **pressure min value:** (from **0.00–08.71psi** or **00.0–60.0kPa**)
 - **vacuum target value:** (from **0.00–08.71psi** or **00.0–60.0kPa**)
 - **time hold:** (for vacuum test) (from **000–180s** [seconds])
 - **vacuum min value:** (from **0.00–08.71psi** or **00.0–60.0kPa**)
6. Use **<LEFT>** and **<RIGHT>** to set the value of the selected parameter.

USB Firmware Update

To perform a firmware update from a USB drive:

1. Download the latest firmware update file for the IP Tester from www.chauvetprofessional.com and place it on the USB drive.
2. Plug the USB drive into the USB type C port of the IP Tester.
3. Go to the **Set-up** main level.
4. Select the **USB Update** option.
5. Use **<UP>** (increases the number value of the selected digit) and **<DOWN>** (selects the next digit) to enter the passcode (**0920**).
6. Select the **USB Update** option.
7. Select **NO** (cancel) or **YES** (continue).
8. Select the firmware update file from the list of options.

Operation

Import Files via USB

To import a file from a USB drive:

1. Plug the USB drive into the USB type C port of the IP Tester.
2. Go to the **Set-up** main level.
3. Select the **Import File** option.
4. Select **NO** (cancel) or **YES** (continue).
5. Select the desired file from the list of options.

Export Files via USB

To export data to a USB drive:

1. Plug the USB drive into the USB type C port of the IP Tester.
2. Go to the **Set-up** main level.
3. Select the **Export File** option.
4. Select **NO** (cancel) or **YES** (exports 2 text files to the USB drive).

Delete Fixture

To delete a fixture profile from the IP Tester:

1. Go to the **Set-up** main level.
2. Select the **Delete Fixture** option.
3. Select the desired fixture profile from the list of options.
4. Select **NO** (cancel) or **YES** (delete selected fixture profile).

Add New Fixture

To add a new fixture profile to the IP Tester:

1. Go to the **Set-up** main level.
2. Select the **Add Fixture** option.
3. Select **NO** (cancel) or **YES** (add a new fixture profile called **Example_**).
4. Select the **Edit Name** option or the **Edit Data** option.
5. Follow step 5 under [Edit Fixture Name](#) and steps 5–6 under [Edit Fixture Data](#).

Information

To view the current firmware version of the IP Tester, go to the **Information** main level.

Testing

The IP Tester can perform automatic tests based on the selected fixture profile, manual pressure or vacuum tests based on easily changeable parameter values, and self-tests to ensure the IP Tester is functioning correctly.

Auto Test

To perform an automatic test on a product with an existing fixture profile on the IP Tester:

1. Follow the instructions under [Connecting to a Fixture](#).
2. Follow the instructions under [Fixture Selection](#).
3. Go to the **Test** main level.
4. Select the **Auto Test** option. The IP Tester will begin testing the connected product. While testing, the **Time hold** will count down and the **Total test time** will count up on the display.
5. When both tests are completed, select **NO** (do not test again) or **YES** (test again).

If either test fails, double-check all hose connections and check that the valve blanks in the condensation valves of the product are sealed tight, as well as the M12 threaded brass nozzle of the IP Tester. If tests continue to fail, contact Chauvet Technical Support.

Manual Test

To perform a manual test on a product without an existing fixture personality on the IP Tester:

1. Follow the instructions under [Connecting to a Fixture](#).
2. Go to the **Test** main level.
3. Select the **Manual Test** option.
4. Select the **Vacuum** option or the **Pressure** option.
5. Use **<LEFT>** and **<RIGHT>** to set the **target value**, **min value**, and **time hold** to the values required for the connected product.
6. To start the test, select **start flag** and press **<LEFT>** or **<RIGHT>** to set it to **ON**.

If either test fails, double-check all hose connections and check that the valve blanks in the condensation valves of the product are sealed tight, as well as the M12 threaded brass nozzle of the IP Tester. If tests continue to fail, contact Chauvet Technical Support.

Self-Test

To perform a self-test on the IP Tester and verify the pressure and vacuum capacity of the product:

1. Attach the air hose to the airline attachment of the IP Tester.
2. Go to the **Test** main level.
3. Select the **Self-Test** option.
4. Select the **Vacuum** option or the **Pressure** option.
5. Use **<LEFT>** and **<RIGHT>** to set the **Max Vacuum value** or the **Max Pressure value**.
6. Block the end of the M12 threaded brass nozzle completely with a finger or thumb.
7. To start the test, select **OFF** and press **<RIGHT>** to set it to **ON**.

If either test fails, contact Chauvet Technical Support.

Operation

IP Tester Connection

To properly link the IP Tester to a PC:

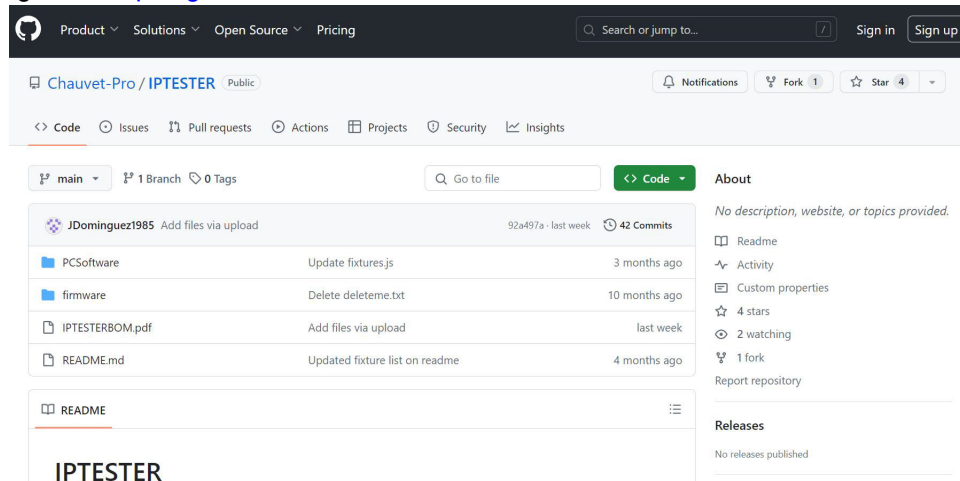

1. Connect the IP Tester to power.
2. Connect the IP Tester to the PC via the USB type B port with the included USB cable.
3. Select the **CP2102 USB to UART Bridge Controller COM##**.
4. Select **Connect**.

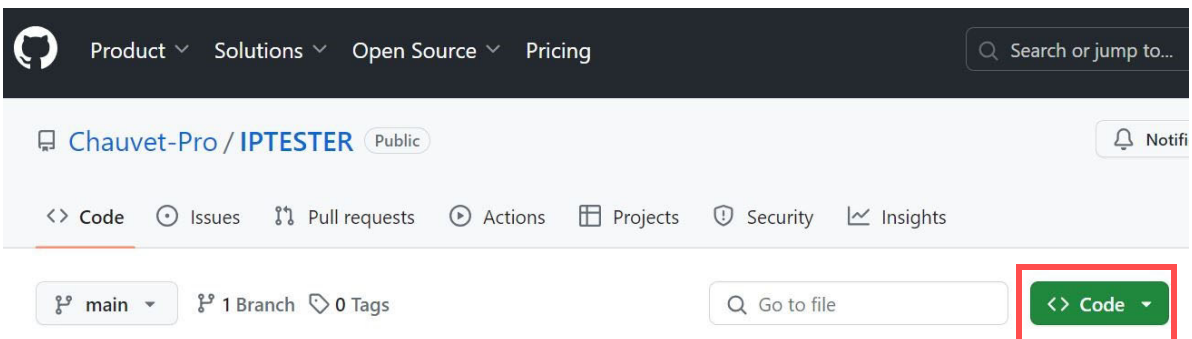

Computer Interface Software

Once the IP Tester is connected to a PC, it is necessary to download the appropriate software. To download the correct interface software:

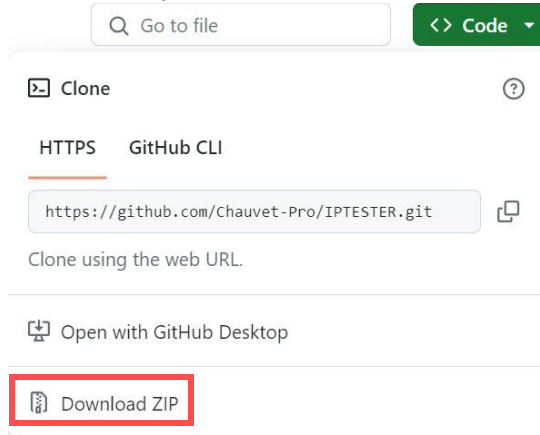

1. Navigate to <https://github.com/Chauvet-Pro/IPTESTER>.

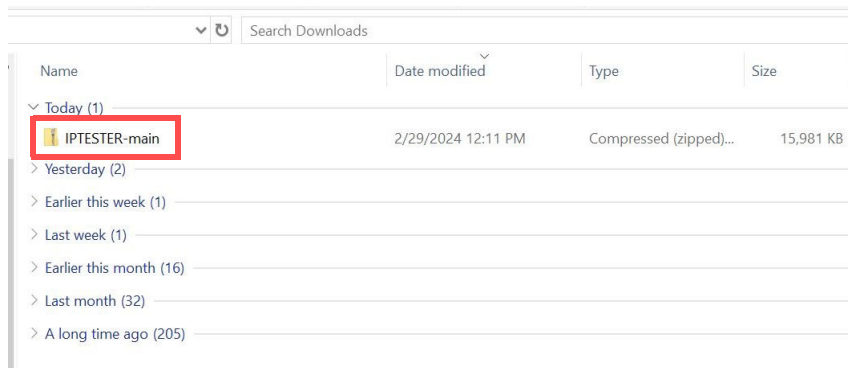

2. Select **Code**.

3. Select **Download ZIP** from the drop-down menu.

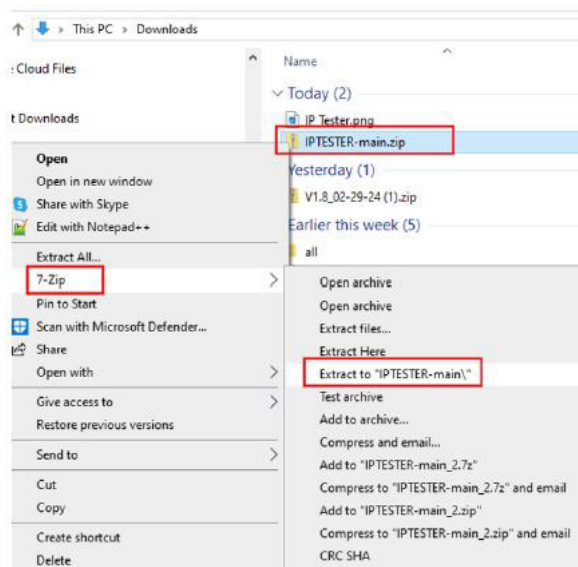

4. On the PC local drive, locate and select the downloaded/zipped file.

Ensure that the PC is equipped with adequate file archiver software such as “7zip.”

5. Select the “IPTESTER-main\” folder in the zipped file.

Operation

6. Select the **PCSoftware** folder.

Name	Type	Compressed size	Password pr...	Size
firmware	File folder			
PCSoftware	File folder			
IPTESTERBOM	Adobe Acrobat Document	259 KB	No	
README.md	MD File	1 KB	No	

7. Locate and select the **index** file.

Name	Type	Compressed size	Password pr...	Size
Cabin	File folder			
pics	File folder			
echarts4.8.0.min	JavaScript File	270 KB	No	
exceljs.min	JavaScript File	275 KB	No	
FileSaver.min	JavaScript File	3 KB	No	
fixtures	JavaScript File	1 KB	No

index	Chrome HTML Document	11 KB	No	
jquery-3.6.0.slim.min	JavaScript File	25 KB	No	
logo	Microsoft Edge HTML Docum...	12 KB	No	

Once the webpage opens, users may connect the software to the IP Tester.

8. Select **Connect**.

Please connect IP tester

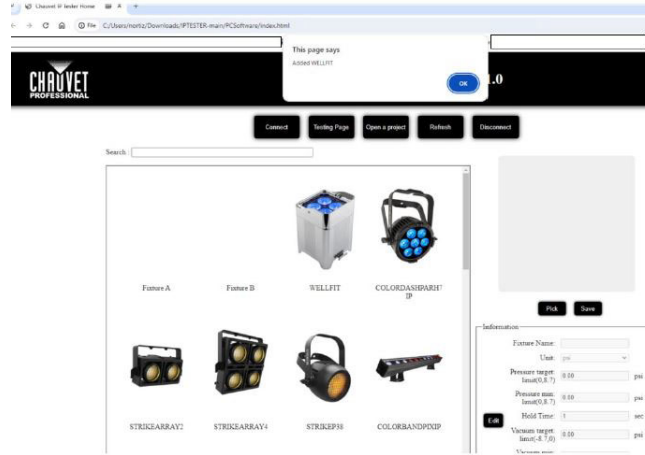

If the IP Tester is not connected, the webpage will prompt the user to do so.

Pre-Loaded Profiles

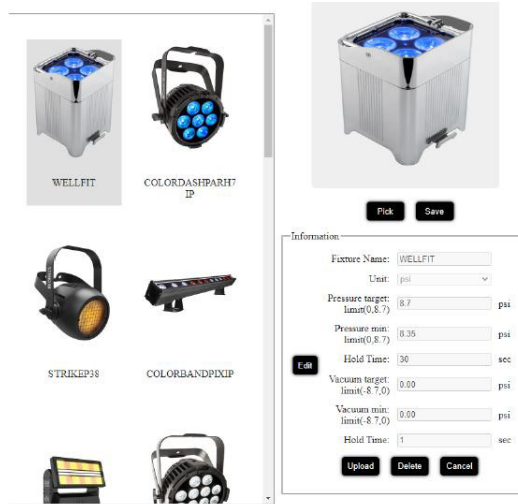

When properly connected to the IP Tester, the browser will display all pre-loaded profiles for various products. To load a profile for the IP Tester:

1. Scroll up or down to select the desired profile.
2. Once selected, the profile will automatically load to the IP Tester.

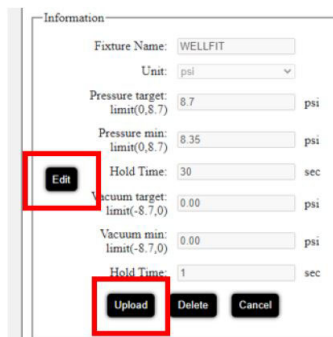

A prompt will appear reading “The page says Added <<FixtureName>>.”

3. Once the page refreshes, select the desired profile to view all information to be loaded.

4. It is possible to edit the various test properties. Select **Edit** to adjust the pressure / vacuum target and minimum values. After editing the values, select **Upload** to save to the IP Tester.

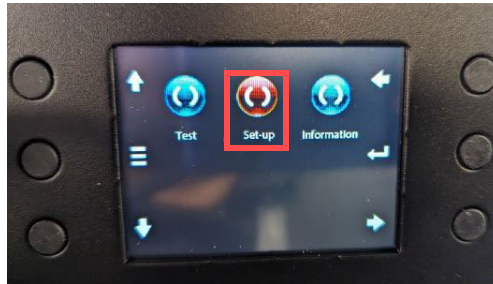

Operation

Fixture Testing

Once the IP Tester is connected and the profile is selected, the fixture is ready to test. To test the fixture:

1. Navigate to the IP Tester screen. Select **Set-up**.

2. Select **Fixture Select**.

3. Select the newly loaded fixture.

4. Navigate to the **Test** option and select **Auto**. It will automatically perform a pressure test, followed by a vacuum test with the pre-loaded values of the fixture.

5. Maintenance

Product Maintenance

Dust build-up reduces performance and can cause overheating. This can lead to reduction of the product lifespan and/or mechanical wear. To maintain optimum performance and minimize wear, clean all lighting products at least twice a month. However, be aware that usage and environmental conditions could be contributing factors to increase the cleaning frequency.

To clean the product, follow the instructions below:

1. Unplug the product from power.
2. Wait until the product is at room temperature.
3. Use a vacuum (or dry compressed air) and a soft brush to remove dust collected on the external surfaces.
4. Clean with a mild soap solution, ammonia-free glass cleaner, or isopropyl alcohol.
5. Apply the solution directly to a soft, lint free cotton cloth or a lens cleaning tissue.
6. Softly drag any dirt or grime to the edge of the surface.

Always dry the product carefully after cleaning it.
