

VISION.NET CONTROL STATIONS

Strand VISION.NET are designed to control architectural lighting by distributing both power and intelligence. The system provides processing power and control at each respective station, eliminating the need for a central processor. VISION.NET provide individual control of up to 16 sliders or up to 35 buttons per station. Combinations of sliders and buttons can be configured as well. A single gang faceplate can have up to 8 buttons or 3 sliders (with a Grand Master).

VISION.NET CONTROL STATIONS

FEATURES

- All station buttons and faders are fully programmable
- All stations include integrated processors and may operate as stand-alone systems
- Station set up and configuration is simple
- Configuration software can upload and download station set-up data
- Commands include (but are not limited to):
 - Raise/lower
 - Preset
 - Toggle on/off
 - Smart commands allow multiple system commands to be executed from a single button press
- All keypads feature programmable backlighting
- Custom-configurable button and slider stations
