

Exo Grid 60° and 45° for Astera Helios, carbon fiber additive manufactured, instant snap-on light control and shaping tool. Two micro-velcro strap fasteners, Neoprene Kit pouch with crystal pocket for accessories. Wgt: gr. 218, oz. 7,7.

**EXO
GRID**

The Exo Grid is a revolutionary concept of beam control.

Entirely made with additive manufacturing technology in nylon/carbon fiber, it allows instant assembly without any spill of light.

The inner part of the grid is made with a “dielectric pattern” to offer an exclusive softness and nuance of light. Available in two versions at 60° and 45°, and in the kit with neoprene pouch, supplied with two nano-Velcro straps for extra safety (however the grid hooks with force) for use on moving cars, motorboats or other. The Exo Grid works on any Astera Helios or Titan tube.

It assembles and disassembles instantly thanks to the innovative springloaded form-factor.
Engineered to accelerate the work of gaffers on set, it allows effective control of the luminous flux.
